

PILOT Control Surface

Preliminary

The new Pilot control surface from Logitek brings you the flexibility of a router-based audio console system with the look, feel and easy handling that novice operators will understand and experienced board operators will appreciate. Available in multiples of six faders (up to 24), the Pilot offers full access to the sources available on a JetStream or Audio Engine router along with simple buss selection and intuitive monitor controls.

The Pilot, combined with the JetStream Mini, provides a cost-effective way for your station to implement IP audio routing and mixing.

- Available in 6-fader increments up to 24 faders
- Program plus 3 AUX mix busses
- CUE switch over every fader with built-in cue speaker
- Room for 16 character source names on bright, wide angle displays
- Displays support Unicode characters including Chinese and Kanji
- Change button over every channel and central SELECT knob for easy access to new sources
- 12 user configurable soft keys
- Quick Route button for selection of program, auxiliary and two user defined sources for monitoring
- Buckets full of mix-minus
- 4 GPI inputs and 8 GPI outputs on back of surface along with RJ-45 for connection to audio engine
- Simple tabletop mounting
- Efficient 20 Watt power consumption
