

Press Release

Next-Generation IP Audio Routing System Now Available

Logitek begins shipping JetStream Mini systems

(April 20, 2009) Las Vegas Nevada, NAB booth N7124 – Logitek Electronic Systems today announced the availability of the JetStream Mini IP-based audio routing/mixing system.

The JetStream Mini is an IP-based audio router that provides full functionality for up to 24 faders in a single or multiple consoles in a single 2RU enclosure. The unit is a configurable node that offers 64 channels of IP audio through five types of I/O cards offering mic preamps, analog inputs, analog outputs, digital inputs and digital outputs. The unit also provides GPI inputs and outputs, profanity delays, input metering and microphone processing. By reducing the number of devices required to achieve a flexible, reliable system, JetStream Mini is easier to install, maintain and configure than other router based systems.

“The high I/O density of the JetStream Mini, combined with its fanless cooling, small size and affordable price, make it ideal for applications such as TV production trucks or any kind of Radio studio,” said Tag Borland, Logitek president.

JetStream Mini, the first of several products available on Logitek’s latest IP Audio platform, is compatible with all Logitek control surfaces. Information on the product may be found at www.logitekaudio.com.

About Logitek

Founded in 1979, Logitek Electronic Systems, Inc. designs and manufactures digital audio console, routing, switching and metering products for the broadcast and professional audio industries. Logitek Console Router Systems are used in radio and television facilities worldwide. Full product information is available at the company’s website: www.logitekaudio.com.
