

## Press Release

### Logitek Brings StudioHub+<sup>®</sup> Convenience to New Product *JetStream Mini IP audio router incorporates industry-standard connectors for rapid installation.*

August 25, 2008

Houston, Texas – Logitek Electronic Systems has announced a partnership with New Jersey-based Radio Systems Inc. in which the company's StudioHub+ interconnection system will be incorporated in Logitek's new JetStream Mini IP audio router.

"The StudioHub+ system has become the wiring standard in radio installations over the past several years," said Tag Borland, Logitek president. "We decided to use this wiring system as a convenience to our customers as they migrate to IP audio operation. It allows good wiring density and ultra-fast connections with the convenience of pre-made cables."

One JetStream Mini unit provides enough capacity for one 24 channel radio console (the Logitek Mosaic, Artisan or Remora). The JetStream Mini has eight I/O card slots that accommodate five types of I/O cards: four mic preamps (with phantom power); four stereo analog line inputs; four stereo analog line outputs; four stereo AES or S/PDIF digital inputs and four stereo AES or S/PDIF digital outputs. All I/O connections use StudioHub+ compatible RJ-45 connectors, accessible on the rear panel of the JetStream Mini.

"By placing StudioHub+ connectors directly on the product rather than on a separate break-out panel, Logitek is helping users keep their wiring clean and efficient," said Dan Braverman, Radio Systems president. "The 'plug and play' concept of the JetStream Mini not only applies to the unit's IP audio configuration, but to the entire installation. This product can be installed, configured and running in record time. We're delighted to be partnering with Logitek on this system."

## About Logitek

Founded in 1979, Logitek Electronic Systems, Inc. designs and manufactures digital audio console, routing, switching and metering products for the broadcast and professional audio industries. Logitek Console Router Systems are used in radio and television facilities worldwide. Full product information is available at the company's website: [www.logitekaudio.com](http://www.logitekaudio.com).
