

Press Release

Synergy Broadcast Group Chooses Logitek

September 2, 2011, Houston, TX – Ludington, Michigan's Synergy Broadcast Group (stations include 94K-Rock and Coast FM) has ordered a Logitek Networked Console System composed of two JetStream Mini units and a Pilot-12 console.

The **JetStream Mini** AoIP platform is a dense 128-channel user-configurable audio node that handles all console functions as well as IP audio networking. Audio mixing, routing and processing along with 24 mix-minus busses are all contained in a single fanless, convection cooled two rack unit enclosure. Users can mix and match analog and digital I/O cards to create the ideal combination of sources and destinations including mics, CD players, studio monitors and more. Incorporating Logitek's JetNet network conduit, the JetStream permits direct network transfer of audio from hard disk playout systems and other Logitek JetNet partners without the use of sound cards.

The **Pilot**, Logitek's most economical console, has the look, feel and easy handling that novice operators will understand and experienced operators will appreciate. It is available in multiples of 6 faders (up to 18) and offers simple bus selection at each fader along with bright, wide angle displays that support up to 16 text characters as well as Unicode characters. 12 user-configurable softkeys are available along with a Quick Route button that allows fast selection of commonly needed sources.

About Logitek

Founded in 1979, Logitek Electronic Systems, Inc. designs and manufactures digital audio console, routing, switching and metering products for the broadcast and professional audio industries. Logitek Networked Console Systems are used in radio and television facilities worldwide. Full product information is available at the company's website: www.logitekaudio.com.
